5 ABSTRACT OF THE INVENTION.  
6

7 The present invention provides apparatus, systems and methods that provide each of a  
8 plurality of users, in response to each particular user's request, information concerning, and  
9 an identification of: each carrier of a plurality of carriers that supports the shipper's preferred  
10 shipping location; whether each carrier supports the shipper's preferred shipping location for  
11 shipping a particular parcel; and pricing for each service offered by each carrier for the  
12 shipper's chosen shipping location, wherein each user accesses the computer system over a  
13 global communications network using a client computer device, each user client computer  
14 device having their own individual electronic connection to the global communications  
15 network.
